Data section

The following data sources will be used in this project:

I. Foursquare API.
    a. https://foursquare.com/
        This service is used to collect Foursquare location data, explore each borough of London and acquire information about venues, especially restaurants, café, bars, pubs, etc. I will use this data to understand how many restaurants are in each borough. Also it will help to create map.
II. The London Data store
    a. https://data.london.gov.uk/
    b. https://data.london.gov.uk/dataset/land-area-and-population-density-ward-and-borough
        The London Data store has been created by the Greater London Authority. It has a lot of free data for every year about boroughs, populations and squares in Greater London. The most useful for me is a list of borough names and borough population for 2020 year.
III. TripAdvisor
    a. https://www.tripadvisor.com/
        Unfortunately, foursquare does not have information about all Afghan restaurants and Afghan Food, therefore I need to collect and check some information manually, particularly on TripAdvisor.
